BPA Quick Start

Today's global climate demands a constant drive to outperform and out-innovate the competition. Leaders of organizations of all types—governments, non-profits, and small and large businesses—are asking tough questions:

- How can our organization improve customer-service levels and enhance productivity without incurring costs?
- How can we manage risk and compliance without losing business advantage?
- How can we empower every employee to innovate: to discover new products, find new markets, or develop more efficient ways to serve customers?

Zirous has the answer: implement Oracle's BPA Suite, a collection of integrated tools to support the entire process life-cycle, from modeling and execution to measurement and optimization. Oracle BPA helps coordinate human process activities, streamlining tasks, triggers, and timelines related to a business process, assuring they are completed as defined. Oracle BPA makes your processes more efficient, compliant, agile, and visible by ensuring that every process step is explicitly defined, monitored over time, and optimized for maximum productivity.
