at \$79,995***

Benefits

Increased Security

Enforces internal security policies and eliminates potential security threats from rogue, expired and unauthorized accounts and privileges.

Enhanced Regulatory Compliance

Cost-effectively enforce and attest to regulatory requirements associated with identifying who has access privileges to sensitive data.

Streamlined Operations

Reduce inefficiency and improve service levels by automating repeatable user administration tasks.

Improved Business Responsiveness

Get users productive faster through immediate access to key applications and systems.

Enhanced user experience

Seamless switching between applications improves productivity for users across a wide range of applications

Reduced Costs

Reduce IT costs through efficient staff usage and common security infrastructure.

IDM Quick Start

The rights and attributes of each person who accesses your IT system continually change as roles, rules, and policies evolve within your enterprise. To stay compliant organizations are looking for a provisioning and administration solution that automates the process of adding, updating, and deleting user accounts from applications and directories; and improves regulatory compliance by providing granular reports that attest to who has access to what. Oracle's IdM Suite of products offers all of that while also providing an automated single sign-on solution for managing who has access to what information across your entire IT infrastructure.

The Oracle Identity and Access Management Suite allow enterprises to manage end-to-end lifecycle of user identities across all enterprise resources both within and beyond the firewall. You can now deploy applications faster, apply the most granular protection to enterprise resources, automatically eliminate latent access privileges, and much more.
