Benefits

Saves time and money

- With only one user name and password, employees more quickly access all their needed systems.
- Users having only one username and password reduces the overall need for helpdesk assistance with password resets.

Improves Security

- Eliminates "password sharing", since passwords are now random, strong, and hidden.
- Centralizes password policies for all systems.

Ease of Use

- True single sign-on for all the applications and resources in the enterprise, with no modification required to existing applications.
- Supports secure deployment in "kiosk" environments, where users roam between various workstations.

Benefits of Enterprise Single Sign-on Password Reset (eSSO-PR)

- Time and cost savings, as users are able to securely reset their own Windows passwords.
- Frees up helpdesk staff for more important, forward-looking projects.

eSSO Quick Start

In today's enterprises, some of the biggest challenges facing IT professionals are dealing with password issues and security. While technology systems allow for increased productivity and a bigger bottom line, money and time are frequently wasted when users are unable to access various systems because of forgotten usernames and passwords. Worse yet, system security is at risk when users write down usernames and passwords. Are you responsible for:

- *Implementing an enterprise-wide password policy?*
- *Helping locked out users regain access to systems with password resets?*
- *Meeting compliance requirements for SOX, HIPAA, or GLBA?*

Achieve these objectives by implementing Oracle's best-of-breed Enterprise Single Sign On products: eSSO and eSSO-PR. Zirous has lowered your entry point into eSSO with our eSSO Quick Start.
